

MODERN JAVA FEATURES (JAVA 17-21) MOST DEVELOPERS STILL IGNORE

Old Java
way

Modern
Java way

***Java has evolved a lot after Java 8.
But many codebases... haven't.***

Records ***(Less Boilerplate, More Meaning)***

Records are made for data-centric classes.

@shyamkumar1998 - All Rights Reserved

They give you:

- ✓ **Immutability by default**
- ✓ **Auto-generated constructor**
- ✓ **equals, hashCode, toString**

No getters.

No setters.

No noise.

Sealed Classes ***(Controlled Inheritance)***

Sealed classes let you restrict who
can extend a class.

@shyamkumar1998 - All Rights Reserved

Why it matters:

- ✓ **Clear domain boundaries**
- ✓ **Safer hierarchies**
- ✓ **Better reasoning in switch logic**

Pattern Matching & Modern switch

Sealed classes let you restrict who can extend a class.

Modern Java gives:

- ✓ **Cleaner conditional logic**
- ✓ **Fewer casts**
- ✓ **More readable flows**

Virtual Threads ***(Project Loom)***

Concurrency doesn't have to be complex.

Virtual Threads allow:

- ✓ **Massive concurrency**
- ✓ **Simple blocking code**
- ✓ **No thread-pool juggling**

Write code like it's single-threaded.

Run it like it's massively concurrent.

Final Message

Modern Java is not about syntax upgrades.

It's about:

- ✓ **Clarity over boilerplate**
- ✓ **Safety over flexibility**
- ✓ **Scalability without complexity**

@shyamkumar1998 - All Rights Reserved

Java 17–21 didn't make Java “new”.

It made Java better.
